

# MADByTE Early Adopter Installation Guide

## Step 1: Install Anaconda

- Go to [anaconda.org/downloads](https://anaconda.org/downloads)
- Select Anaconda for Windows Python 3 version
- Download the .exe installer
- Run the installer and use all default options
  - While it is installing, you will see an option for “Add Anaconda as my default Python 3.7” checked by default
    - Do that.
- When finished, run the program called “Anaconda Prompt”

## Step 2: Install MADByTE

- Unzip the file called ‘madbyte\_master.zip’ into your downloads folder.
  - You will need to keep this folder here.
- Simple click the “madbyte\_install.bat” script
  - This will setup a local python environment with all the required packages
- You can now launch MADByTE with the “MADByTE.bat” script
- *OPTIONALLY*: you can copy a shortcut of the MADByTE.bat script to your desktop
